

ASSET MANAGEMENT REPORT ON ASSETS

InfraCycle Software Ltd.

Providing products and services since 1994

In 2009 all municipalities will be required to "Report on Assets"

Municipalities currently only report on revenues. InfraCycle Software contains a comprehensive list of municipal assets and can assist Municipalities by producing reports on assets.

InfraCycle software improves fiscal performance of municipalities by analyzing interrelated functions of a municipality such as:

- Land Uses, residential, commercial and institutional and community services;
- Lifecycle analysis of all Assets; and,
- Revenue generation from all sources

Inventory Storage of Municipal Assets is a function that enables the municipality to understand the short and long-term lifecycle costs of all municipal assets. This includes assets such as:

- Vehicles and equipment;
- Municipal buildings;
- Linear surface infrastructure; and,
- Linear deep infrastructure.
